EDUCATION

San Francisco State University

B.S. Computer Science & B.S. Business Analytics; GPA 3.8, Dean's List (6 sem.)

San Francisco, CA

2023 – 2027

EXPERIENCE

AI Research Fellow

Jun. 2026 – Aug. 2026

Principle Labs — Blackswan

Remote

- Designed an entity-relative risk-classification system scoring real-time news events for black-swan risk to a specific company via a six-label taxonomy and six-axis quantitative risk manifold; built in Python on the OpenRouter API across 10+ LLM families
- Engineered a falsifiable 5-check decision procedure and Pydantic structured-output validation layer (degenerate-content detection, schema fallback chains), cutting a systematic over-classification failure from 6.2% to under 1% across three independent model families
- Built a numeric risk-signal extraction and generate-then-verify pipeline reaching 92.7% recall on real ground truth independent of the categorical label, and 100% verified accuracy on novel calibration events across 45 test cases
- Adjudicated a complete 687-event ground-truth set and shipped a magnitude-based escalation cascade cutting live classification cost 52.3% at 100% recall on priority events; presented methodology and results at Principle's fellowship demo day

Instructional Student Assistant

Aug. 2026 – Present

San Francisco State University — CSC 230 & CSC 675

San Francisco, CA

- Support three sections across CSC 230 (Discrete Mathematical Structures) and CSC 675 (Introduction to Database Systems) in workshops and office hours, covering propositional logic and truth tables through relational design and SQL querying in PostgreSQL
- Grade homework, review student GitHub pull requests for correctness and code quality, author answer keys, and manage grading in Canvas

Tutor — Business, Math & Science Specialist

Aug. 2026 – Present

SFSU Tutoring and Academic Support Center (TASC)

San Francisco, CA

- Tutor roughly 11 students per week across business, math, and science coursework, adapting explanations to each student's background and course level rather than working from a fixed script
- Completed a semester-long tutor education seminar on learning theory and instructional practice, with weekly reflective analysis of tutoring sessions

PROJECTS & AWARDS

Kriegsspiel — SCSP Winner, 2nd Nationally | *Python, Claude API, RAG*

May 2026

- Won SCSP Regionals and placed 2nd nationally (Washington, D.C.) with team Roux Ex Machina for an AI-powered wargame simulation platform for national security scenario analysis
- Led RAG and doctrine implementation retrieving operational context and force-structure constraints, and built the adjudicator engine's decision logic translating doctrine and fog-of-war effects into deterministic state transitions paired with LLM-generated adversary moves

Aetheris OS — SF Hacks Winner | *Python, FastAPI, Streamlit, Gemini, MongoDB, Docker*

Feb. 2026

- Won SF Hacks with an autonomous building-management system converting AI server waste heat into a managed building resource
- Implemented semantic search and RAG retrieval over building-system context (Gemini embeddings, Actian VectorAI, MongoDB) and 72-hour predictive thermal planning, served via FastAPI and a Streamlit dashboard

Delartina | *Next.js, TypeScript, Prisma, Clerk, Inngest, n8n, Zod, Playwright*

Aug. 2026

- Built a policy-gated revenue-decision workbench for founder-led B2B teams that screens target accounts down to the 0–3 worth a founder's attention, replacing an AI email generator with an evidence-and-approval workflow that can abstain instead of forcing a recommendation
- Designed an asynchronous evidence-discovery pipeline (signed n8n webhook callbacks, deterministic priority scoring, hard qualification gates) that separates sourced fact from model interpretation and writes every Approve/Dismiss decision to an auditable receipt trail
- Shipped an offline-deterministic mode so the full assessment and drafting workflow runs and demos without live AI or CRM credentials; hardened with Playwright end-to-end coverage and a documented threat model

TECHNICAL SKILLS

Languages: Python, Java, C, C++, SQL, JavaScript, TypeScript, HTML/CSS

AI/ML: RAG, Vector/Semantic Search, Embeddings, LLM Integration, Structured Outputs, Predictive Modeling

Tools: FastAPI, Next.js, React, Node.js, Prisma, Docker, Git, PostgreSQL, MySQL, MongoDB, DataGrip, Playwright, pandas

Certifications: Google Data Analytics
